

why cleanwater?

cleanwater has addressed the twin issues of efficiency and cost to develop a system that is suitable both for domestic emergencies, camping and caravanning, and for organisations and businesses such as schools, churches, clinics and hospitals throughout the world where access to clean and safe drinking water is an on-going problem.

HIGH EFFICIENCY
99.99% Removes 99.99% of pathogenic bacteria, disease-causing cysts such as Cryptosporidium and Giardia, and particles.

LONG LIFE/VALUE FOR MONEY
£ On average, the cleanwater filter candle will remain effective for at least 12 months of continuous usage (depending on water quality). The candle has a cleanable surface for longer life.

ANTI-BACTERIAL ACTION
The Sterasyl filter candle is impregnated with silver to prevent bacterial growth removing the need to periodically sterilise the candle.

RETAINS ESSENTIAL MINERALS
Keeps those minerals in the water that are beneficial to health.

NO POWER REQUIRED
cleanwater filters require no external source of power to function, making them effective in all situations where fresh water needs to be purified for safe drinking.

PROVEN IN EXTREME ENVIRONMENTS
cleanwater filters have been tried and tested in various third-world situations changing the quality of life for many thousands of adults and children.
