

THE PROBLEM AND ITS SOLUTION – EASY USE AND ENVIRONMENTALLY SAFE

MICROPUR® – FOR A CHLORINE-FREE DISINFECTION AND PRESERVATION OF DRINKING WATER.

You don't want to spoil your yachting tour, therefore the water you have taken on board must always remain pure and harmless, free from hazardous germs, and free from odours and taste.

Micropur ensures permanent high quality of the water. I.e. on yachting holidays, or on prolonged motorboat tours.

Experienced cruisers have known this for a long time: even clear water can be full of germs and the source of malignant diseases. I.e. typhoid, paratyphoid, dysentery, cholera, and many others. Yet polluted water may not only be hazardous when you drink it but also when showering or cleaning your teeth with it. Responsible shipowners and skippers will therefore consider Micropur a vital and useful part of the equipment.

Micropur is an easily water-soluble silver-salt-compound that reliably kills all hazardous bacteria.

Micropur not only serves as an efficient disinfectant but also for germ-free preservation of drinking water. It is also used as a disinfectant of water tanks and pipes.

Micropur is neutral in taste and odour, it is harmless even when overdosed.

As simple as that:
Even crystal-clear water may be hazardous to your health.

Micropur preserves drinking water from reinfection and algae growth up to six months.

Micropur is free of chlorine and iodine and keeps the natural minerals in the drinking water.

Micropur powder and tablets can be stored up to ten years; the liquid up to two years at least.

MICROPUR®

DISINFECTED DRINKING WATER STORAGE.
ALWAYS AND EVERYWHERE.

Item	contents	dosage	range of application
Tablets			
MT 1	100	1 each for 1liter	average travellers, tours
